

iCARD

ID CARD PRODUCTION SYSTEM

iCARD

An ID Card Software that uses Mifare technology to provide a one-card solution to your company.

Saving your organisation money for any additional ID cards, software, and avoids input replication and staff time.

The information entered is collated when someone starts employment, a visitor signs in, a contractor arrives onsite or students enrolls onto a course.

The screenshot displays the NHS x iCard software interface. On the left is a blue sidebar with navigation options: Dashboard, Designs, Invite new members, Approvals, Staff members, Extra members, Collections, Permanent Ban, and Logins. The main area shows 'Showing 5 printers.' with five printer cards, each displaying ID, Name, IP Address, Status, and a 'Reset Status' button. Below the printers is a summary section for 'Print Queue - 0', 'Currently Printing - 0', 'Last 10 Print Errors', and 'Issued Cards'. A table below shows '0-0 of 0 records' with columns for Ref No, First name, Last name, Print Sent Time, Last Printed Date, Print Site, Printing Error, and In Queue. The footer contains copyright information for 2024 IPS Ltd and a 'Need Help' link.

iCard allows the manual entry of user records not otherwise supplied from your Management Information System (MIS system), such as contractors or visitors. You can set users to have allocated access levels inside iCard, which will give them the appropriate access rights within your access control system.

iCard printing can be done individually or in batches, either manually or through your MIS system, depending on your preference. The print job can be sent to any ID Card printer that is available on your network, allowing for

flexible print stations and helps you to reduce queue time.

iCard – ID Card Software, is fully compatible with all Auxilium products, it can be integrated to work with both your existing hardware and software (subject to a consultation).

The software is programmed to enable you to have a range of controls like having a range of users levels, including; Admins and Operators. The Admin role has overall authority and can allocate a range of required permissions for your operators.

FEATURES

Web based Application – No end user install required

Site/Organisation license – any number of users access simultaneously, no additional costs

3 releases annually – no costs for licensed users

User log in by AD or as local managed users also ID card log in

Multi user access levels – Greater control of all functions by user level

Designed for education – multi levels of printing/encoding by site or location

Full log files on all transactions and history – complete accountability

Automatic image management – auto cropping with face recognition

Card blocking and user look up from Android device – Versatility

Issue number management – Prevent cardholders having more than one card or duplicates

Temporary card issuing and management – all in one system with a single user interface

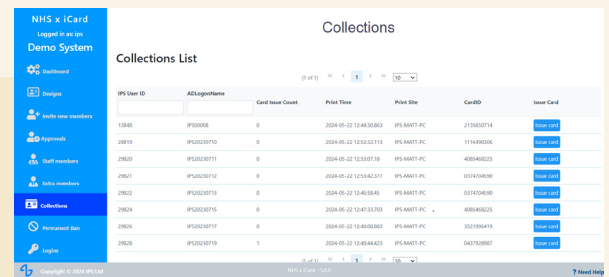

Multi access control system encoding and integration with Paxton, Salto, Smart Air, Lenel, Win-Pak and many more

Easy to use at all levels designed to minimize staff training.

Usage reports – exportable showing cards printed encoded failed etc

Azure Single Sign On (SSO) functionality

Includes Magicard 600 SLE Network printer support.
