

A stylized logo consisting of a vertical purple bar on the left and a purple semi-circle on the right, together forming the letters 'IP'.

iPAY

**A CUSTOMISABLE WEB
PAYMENT SYSTEM**

iPAY

Auxilium have built a customisable web payment system to minimise the amount of administration for an organisation taking online payments and optimising the front end to simplify the process of making the payments for all types and skill levels of potential users, We call this system i-pay.

FEATURES

We minimise the amount of money paid in transaction charges to one of the lowest in the market today, the site enables onsite cashless accounts to be topped up, goods, services and courses to be paid for, educational visits to be set up paid for and supporting documentation stored, as well as equipment hire and miscellaneous online services such as password change, and photo update.

This is in effect an online portal that enables students and relations to top up accounts or view information. In a number of Colleges we have interfaced with the College own website or shopify to provide an online store experience that is in keeping with the branding of the organisation.

There is a full suite of reports available the system also has direct integration with the organisations finance systems for seamless accounting and will use the organisations existing banking partner.

iPay supports learners by allowing them to view their bursary and free school meal allowances in real time. Parents and Guardians can manage student spending, and optionally track what meals have been purchased.

Take payments over the phone and create “Buy Now” links to create a payment link for customers to pay for online. These links contain pre-populated amount to pay, and information relating to any service required.

Integration with your Active Directory system to provide a seamless login experience to students and staff alike. AzureAD support, to allow for single sign on logins which includes any organisational rules such as multi factor authentication.
