

iMARK
PHONE APPLICATION
FOR CHECKING STUDENTS

iMARK

iMark allows users to quickly and easily view their timetables from kiosks, tablets and other mobile devices. Your schedule is a simple card tap away.

Whether you are a member of staff or a student, iMark can help you get to where you need to be.

Tap your card on an iMark enabled device to view your current and next lesson. A copy of your full timetable is also available to view in iMark, allowing you to plan your day.

You can use iMark with your android smart phone or tablet, so there's no need to carry a dedicated device in addition. The Application itself is lightweight, so won't take up much of your phone's storage and won't slow you down.

Timetable

Emergency Contact Details

More than just a timetable

iMark has the ability to display a student's emergency contacts. Simply tap the student's card on an iMark enabled device and select emergency contact details.

Take control

You will have full control over who can access iMark. No need to worry about your data, only users that have been granted access can view information stored on iMark.

Reporting capabilities

When combined with iAccess +, iMark becomes a powerful reporting tool. You will not only have the ability to block users (Requires iAccess), but also to report incidents as they occur. Whether it's a health, security or safeguarding concern, use iMark to flag the incident against the cardholder.

FEATURES

Cardholder's Name

Cardholder's User Type such as Staff/Student/Contractor

Cardholder's current lesson – Requires iMark

Cardholder's emergency contact details – Requires appropriate operator privileges to see sensitive information

Cardholders medical information

Cardholders Allergies

Create events, record student and staff attendance via scanning, and generate reports after the event closes.

Register function to mark a live register – Requires iMark

iMark can be used to display a room's schedule in real time. Place a kiosk at the entrance way to display the current lesson, and work as an access point for users to check their timetables. This can help students to identify that they are in the correct place if they are unsure of where to go.

BLOCK function to restrict access of cardholder in integrated access control system – Requires iAccess

"Report Incident" allows the operator to report a health security safeguarding concern and flag it against the cardholder. Reportable interface for these incidents. – Required iAccess+
